

RISE 2010

Good research relies on cooperation, and international teamwork is becoming increasingly important. This means that scientists and engineers with international experience are increasingly sought after in both business and academia. The number of truly exciting programs abroad for undergraduates in the sciences and engineering is still far too small. That is why DAAD (the German Academic Exchange Service) offers unique opportunities for students from North America and from UK interested in gaining serious research experience in Germany.

Unique Opportunities for Gaining Research Experience in Germany

RISE – Research Internships in Science and Engineering ...

... gives students in the fields of biology, chemistry, engineering, earth sciences, and physics the chance to spend a summer working with PhD students in Germany on serious research projects. The PhD students help integrate the undergraduate directly into the lab work and serve as personal and professional mentors. All participants receive a scholarship to help cover living expenses, and the partner universities and research institutions provide housing assistance.

Undergraduate students...

...in science and engineering get a glimpse of advanced research work while gaining desirable practical experience in their field. They learn about Germany from the inside while meeting new people and taking their first steps with the German language – or practicing their existing language abilities. Long-lasting friendships are born from these intensive work environments that are balanced with fun evenings or weekends out with colleagues.

Learning from each other

Beyond being the matchmaker for undergraduate research assistants and PhD students, DAAD also invites all fellows to a three-day event during the summer where they have an opportunity to learn from each other's experiences while exploring the historic city of Heidelberg and a modern German multinational corporation.
